

GreenThreads Denver Staffing Forecast Recommendation

Prepared by Kristina Nastally

GreenThreads' customer and store data show that staffing demand is not constant. Of 280 Marketing B customers, 76 (27.1%) placed more than one order, while average orders varied substantially by acquisition channel—from 3.79 for Email to 1.51 for Facebook. Historical Austin store activity also varied substantially by day. Together, these findings support using customer and store-demand data rather than one fixed staffing assumption.

Choice Set	
Option	Trade-off
1. Manual staffing	No implementation cost; reactive to demand changes
2. Manager-led demand analysis	Uses real demand data; adds recurring manual workload
3. AI-assisted forecast	Integrates multiple demand signals; requires clean data, governance, and human review

Recommendation
Recommend Option 3: AI-assisted staffing forecasting. GreenThreads should combine customer trends and historical store activity to recommend Denver staffing needs. This directly advances the Level 3 staffing-forecasting opportunity identified in HW#1 while reducing manual analysis. Because historical markets may not perfectly predict Denver demand, forecasts should support, not replace, manager judgment.

The recommendation should be treated as decision support rather than an automatic staffing system. Historical activity from other GreenThreads markets may not perfectly predict Denver demand, so managers should review forecasts against current applicant availability, launch conditions, and budget constraints before taking action.

Tools, Method & Verification

I used ChatGPT with the actual GreenThreads datasets and Google Sheets for cleaning, validation, exploration, and analysis. I checked Marketing B for missing values, duplicate IDs, invalid dates, nonpositive values, and AOV inconsistencies; no underlying corrections were required. Key results were spot-checked with Sheet formulas and pivot tables rather than relying solely on AI calculations. Decision rights: AI may recommend staffing levels, but HR and Denver store management retain final hiring and scheduling authority.
